My skills make me a great fit for any business, finance, or data related internship role at any company. Through working on hands-on projects, I have experience solving real-world problems in many areas of business, such as market forecasting, financial modeling, insurance, economic policy, financial risk, credit card fraud, product design, research cost reduction strategies, etc. These skills are valuable in a position that emphasizes interdisciplinary, practical applications of business.

Another experience I had with my past projects is being able to come up with business strategies and models for multiple goals simultaneously, which is highly relevant to the responsibilities of an intern and beneficial for a company's growth. Most importantly, my experience with using data analytics and machine learning in business would be an additional plus because it helps companies develop the best business models and strategies to optimize their economic performance.

I also have plenty of unique soft skills that would make me valuable to a company. For instance, I have experience leading and collaborating on projects, so I would be comfortable with the amount of collaboration and leadership required for any position. I also have experience organizing projects, so I am a great self-starter and would fit well into a flexible work environment where interns undertake projects without needing to be told. Most importantly, I am a fast learner and am always looking forward to learning new, unfamiliar things, so the modern work culture of learning challenging problems and growing from them fits who I am as a person. Instead of working on skills I already have experience with, I like to focus on tasks I am unfamiliar with since that is how I get to develop myself.

Lastly, I have a vision of what a successful internship will be. A successful internship is not only about building meaningful connections and social opportunities but also about developing myself into who I want to be in the future, so I can contribute to the world in a more effective way. For instance, I would structure my internship based on my career goals to work in financial tech since I am interested in the future of this field. After this internship, I would have a better idea of who I want to be and what I want to work in.
